

## ABSTRACT

The present invention provides a method for constructing a fiber-mutant adenovirus vector in which a foreign peptide is introduced by a simple system into the fiber HI loop-coding gene of adenovirus; and provides a fiber-mutant adenovirus vector which is constructed by this method.

1. A method for constructing a fiber-mutant adenovirus vector, comprising:  
a) introducing a foreign peptide into the fiber HI loop-coding gene of adenovirus;  
b) constructing a fiber-mutant adenovirus vector which is constructed by this method.
